

Caryopteris 'Hint of Gold' Blaze of colour in Holland

lisaura EU 25088

Bred by Peter Catt of Liss Forest Nursery

Caryopteris 'Hint of Gold' has flowered very impressively in the specialist trials in the RHS Boskoop Garden.

This image courtesy of Peter van Rijssen of Plantipp shows the huge potential in foliage and flower colour given by C. 'Hint of Gold' based on superb quality liners as developed in the UK by ProVaR members.

It was a difficult autumn 2012, hard winter and growing conditions through spring and summer just as variable and stressful as UK but C. 'Hint of Gold' has burst through all of that.

For further information on C. 'Hint of Gold' and C. 'Sterling Silver' please refer to your ProVaR offer or contact ProVaR or Mark Warner at Liss Forest Nursery.

Yet more new innovative varieties of Caryopteris are being developed by Peter Catt based on his strategy of breeding interspecific hybrids - watch this space.

Caryopteris 'Hint of Gold' is available in the UK through ProVaR and is managed in Europe by Genesis Plant Marketing, sublicensed through Plantipp in many European territories. Images courtesy of Genesis and Plantipp.
